Helping the fresh produce business move forward: FRUIT LOGISTICA Trend Report Part 1 – free download available

Leading fresh fruit and vegetable trade fair provides new, groundbreaking and valuable supply chain analysis to everyone in the business.

Berlin, 5 March 2018 – Worldwide consumer spending on fruit and vegetables is expected to approach the five-trillion euro mark by 2030, according to new research written by consultancy Oliver Wyman and published exclusively by FRUIT LOGISTICA, the world's leading trade fair for the fresh fruit and vegetable business.

That figure, revealed in Part 1 of the FRUIT LOGISTICA Trend Report 2018, represents more than double the 2.1 trillion euros sales recorded in 2015. What's more, markets in the Asia-Pacific will account for over half (56 per cent) of those global fresh produce sales by 2030, more than the rest of the world combined.

As the marketplace for fresh fruit and vegetables becomes increasingly globalised and interconnected, the way those products are carried from origin to market is changing, in many cases dramatically. The drive towards greater efficiency, for example – often through the use of new technologies like blockchain – is helping companies to improve, expand and consolidate.

Part 1 of the FRUIT LOGISTICA Trend Report 2018, which has now been published in full on the FRUIT LOGISTICA website following its recent unveiling at Fruitnet World of Fresh Ideas, explains how this evolution will influence operators in the fruit and vegetable business during years to come.

The FRUIT LOGISTICA Trend Report 2018 picks out four trends that demand particular consideration:

- Increasing world population
- Greater use of digital technologies and data
- Autonomous transportation
- Increased consumer interest in health and well-being

It also looks closely at when and where in the world those factors will have the biggest impact, taking into consideration major geographic trends as well as the time, manner and place in which people will choose to consume fresh fruit and vegetables.

To read more about future trends in fruit and vegetable markets, as well as how the fresh produce supply chain is being re-shaped as a result of those trends, download your free copy of the FRUIT LOGISTICA Trend Report 2018 [here](#).

Figures cited are published and analysed by Oliver Wyman on behalf of Fruit Logistica, and sourced from Passport Euromonitor.
